Lean Six Sigma

Government agencies, commercial businesses, and non-profit organizations worldwide have benefited from the Six Sigma methodology to improve the performance of work processes. Building on Six Sigma principles, Lean Six Sigma goes one step further and eliminates waste identified from the work process under scrutiny and anything else that does not represent value to the customer. By focusing on eliminating non-value added waste in a process, an organization can derive benefits from reduced process cycle times, improved on-time delivery performance, reduced costs, and increased quality. With Lean Six Sigma you have the ability to transform your organization, become faster and much more responsive to customers, and increase organizational performance.

The Wedgewood Advantage

Wedgewood is partnering with Six Sigma and Advanced Controls, Inc. (SAC) to deliver world-class Lean Six Sigma instruction and consulting. Dr. Pradeep Deshpande, President of SAC and Master Black Belt, is a pioneer in his advocacy of Six Sigma as an enabler to solve the difficult challenges of the 21st century. His extensive experience leading and implementing Six Sigma projects worldwide and his published works demonstrate that through Six Sigma principles, organizations can improve the performance of every repetitive work process, manufacturing or service. Dr. Deshpande's instructional approach demonstrates that Six Sigma is applicable to everyday life.

What We Offer

We offer the following training and certification programs:

- » Champion Training
- » Green Belt Training and Certification
- » Black Belt Training and Certification

- » Improve business processes
- » Improve performance
- » Increase quality

Results you can achieve

- » Reduce waste
- » Improve product and/or service delivery
- » Improve customer satisfaction
- » Reduce cost
- » Improve bottom line

Lean Six Sigma Training and Certification Programs

» Champion Training

Without leadership support and involvement Lean Six Sigma initiatives fail. As champions, leaders advocate Lean Six Sigma principles to improve the efficiency and effectiveness of business operations. This course will help champions successfully deploy Lean Six Sigma methods and select projects. More specifically, this course enables champions to align strategic business objectives and Lean Six Sigma initiatives, implement a deployment plan, and define the champion leadership roles in supporting and executing that plan.

» Green Belt Training and Certification

Green Belts gain a firm understanding of Lean Six Sigma concepts and tools including deployment practices, project development, and the Design-Measure-Analyze-Improve-Control (DMAIC) method to improve processes. Individuals receive hands-on instruction and coaching as they complete a Lean Six Sigma project and prepare for the Green Belt Certification exam.

» Black Belt Training and Certification

Black Belts gain a thorough understanding of all aspects of the DMAIC model in accordance with Lean Six Sigma principles. Individuals receive hands-on instruction and coaching from our Master Black Belt, while leading a team of Green Belts through project development and implementation. Black Belts will complete this training and have the knowledge, skills, and practical experience to serve as improvement experts in organizations to continually ensure that Lean Six Sigma projects align with and support strategic business objectives.

» Lean Six Sigma Project Facilitation and Support

Wedgewood customizes a flexible approach to deliver a process improvement method that utilizes Lean Six Sigma tools and techniques most suitable for your organization. Our on-site services are offered by Lean Six Sigma implementation leaders in change management and business process redesign. These support services include: assessment, training, coaching, certification, and project facilitation.

Wedgewood Consulting Group, Inc. partners with its clients to help them develop an innovative, flexible, and effective workforce to drive organizational performance.

Six Sigma and Advanced Controls, Inc. provides six sigma advanced process control training, software, and consulting services to industries and universities.
